

## 2003 User Training Practical Exercise

Terminal Objective: Provided with various radiological postings, tags, labels and “samples”, the User will correctly demonstrate/ or orally describe how to handle materials and personnel entering and exiting experimental areas.

Objective 1: Shown an exit posting, the User will correctly describe actions to take for removing an item that has been exposed to the beam from ER1/ER-2 or WNR.

Objective 2: Provided with various tags, the User will correctly identify the tag which must be on an item before it can be removed from an area controlled for volume contamination to an uncontrolled area.

Objective 3: Shown a sample with a “Health Physics Radioactive Material Survey Tag”, the User will orally describe how to get the sample back to his/ her regular work site.

Objective 4: Provided with various tags and labels, the User will correctly select the tag to apply to maintain knowledge of process about an item.

Objective 5: Provided with a sample, the User will correctly identify/ demonstrate how to get the sample surveyed by a Radiological Control Technician.

Objective 6: The User will orally describe when he/she must use the personnel contamination monitor (PCM).
